

What is json

Json is not programming language

Flutter

SQL, PHP

Data

JS

C++

it's local storage

Data is stored

Python

API App Programming Interface

Link

To deal with data to make req

Call flow → request → Data flow → response

Get → Retrieving a single or multiple resources

Post → creating a new source

Patch → updating an existing resource

Put → updating or creating new resource "تغيير المصدر"

Delete → Destroying a resource

Components of API

1) base URL

"المكان"

2) Endpoint

3) Headers

req options

"البيانات"

4) Body

5) Query parameters

"base URL / users? name = Mona"

Status code "int"

→ resp

API في

1) Failure

2) loading

3) success

Date : _____

Subject: _____

token → الى برني صيد الابلت 889 sign in

Note

For clean code and avoiding conflicts →

You must separate baseUrl in class alone

API consumer → delete, Patch, Post, get →

objects requests

create: (Context) → setUserCubit(Dio consumer())

get {

Future <String> path, {

<dynamic> object? data,

Map<String, dynamic>? query parameters }

Dio Exception Types 1) connection Timeout

2) send Timeout

3) receive Timeout

4) bad Certificate

5) bad Response

بطلت كل status code ←

6) cancel

7) Connection Error

8) unknown

FIRST

Date: _____

Subject: _____

```
Dio Consumer({required this.dio});
```

```
  dio.options.baseUrl = "
```

```
  dio.interceptors.add(ApiInterceptor());
```

```
  resp ||, req ||, dio ||, dio.interceptors.add(LogInterceptor());
```

↓ on request ↓ on response

on response console.log

"package" endpoint

Sign in → Json
